STRATEGIC INITIATIVE PROPOSAL

Prepared for: Missy Kendrick, President & CEO, Choose Columbus GA
Prepared by: David Fabian Cadelinia, Principal Consultant, ODYNEX AXIS
Date: August 2026 | Institutional Framework Briefing

---

1. Executive Summary & Personal Commitment

Since launching ODYNEX AXIS this past February, I have been carefully constructing its structural foundational layers from the ground up. I am bootstrapping this vision with limited personal resources—investing everything I have into its architecture because I know the immense value it will bring. However, a vision of this scale cannot exist in a vacuum. For our proprietary systems and organizational missions to fully materialize, we must forge deliberate, high-level collaborations with regional economic champions like Choose Columbus.

This proposal is completely adaptable. It is designed not to duplicate or subtract from your current programs, but to seamlessly integrate with the overarching day-to-day mission of Choose Columbus. Our intent is to introduce a sophisticated new industry vertical that activates localized supply chains and generates true regional economic uplift.

2. The Council Framework: Integration Over Duplication

Rather than forcing the demographic scale of Muscogee County to maintain a completely standalone Asian Chamber of Commerce, we propose a leaner, high-utility structure: establishing the nonprofit as a dedicated **Asian-American Business Council** operating directly *within* the existing Greater Columbus business chamber ecosystem. This structure guarantees immediate institutional alignment while giving minority-owned firms a specialized voice.

Because we are scaling this architecture from the ground up, we are actively seeking foundational sponsorship, public-private partnerships, and corporate allies who share our commitment to long-term economic resilience. This council will utilize ODYNEX AXIS's institutional portfolio to deploy a rigorous **Three-Phase Horizontal Evolution System** to bring structural utility to Columbus:

- **Phase 1: Institutional Systems Mapping (The Earth Twin Platform):** We deploy our proprietary *Earth Twin* software stack to synthesize geospatial data, population demographics, and public policy trends. This converts fragmented legacy networks into highly transparent, empirical, and data-driven workflows ready for incoming Tier-1 industrial suppliers.
- **Phase 2: Regional Capacity Building:** Building upon our existing regional economic cluster initiatives and joint capacity development alongside the *SOWEGA Asian Pacific Chamber*, we will replicate this operational framework locally to cultivate highly specialized minority logistics and logistics-adjacent pathways.
- **Phase 3: Macro-Infrastructure Integration (Project Koridor):** We deploy the *Project Koridor* logistics framework as a structural vector bridging regional production nodes directly to major global export channels, entirely shielding Columbus's core capital assets from transactional friction.

3. Collaborative Alignment & Next Steps

We want to ensure that as the industrial and technological landscape of West Georgia continues to evolve, our minority business ecosystem is robustly future-proofed and engineered to protect your master recruitment plans. Our full structural methodologies and institutional frameworks can be reviewed directly at **odynexaxis.biz**.

I would welcome a brief discussion or meeting to align this vision with your office's strategic benchmarks and explore foundational council sponsorship frameworks.
