MEMORANDUM OF REGIONAL INITIATIVE

Cross-Border Workforce & EdTech Development Pipeline

TO:	1. President & CEO, Greater Columbus Georgia Chamber of Commerce & Economic Development Authority 2. Office of the President, Columbus State University (CSU) 3. Office of the President, Columbus Technical College 4. Mayor Kenneth Sumpter, City of Fort Gaines Administration
FROM:	David Fabian Cadelinia, Founder & Institutional Architect Odynex Institute | Odynex Axis Logistics LLC
DATE:	August 14, 2026
SUBJECT:	Proposal: Cross-Border Workforce & EdTech Development Initiative — Project Koridor

1. EXECUTIVE SUMMARY

Odynex Institute, Odynex Axis Logistics LLC, and the newly established SOWEGA Asian Pacific Chamber of Commerce and Foundation are advancing a closed-loop AgTech and bio-logistics corridor in Southwest Georgia (**Project Koridor**). This initiative turns localized agricultural and paper waste streams into highly valuable animal feed, lipids, and industrial derivatives, leveraging Fort Gaines as a regional epicenter.

To bridge the workforce training gap and deploy a pioneering youth educational framework, we are proposing a multi-institutional partnership. This framework will utilize the advanced technical talent of Columbus-based students to build, prototype, and implement our regional AgTech infrastructure.

2. ACADEMIC CORRIDOR: MULTI-DISCIPLINARY SENIOR CAPSTONE INITIATIVE

Rather than outsourcing core engineering and software design to out-of-state entities, Project Koridor seeks to directly engage West Georgia's student base through a commercial-scale Capstone partnership.

Track A: Columbus State University (TSYS School of Computer Science & Education)

- **Objective:** Software development of the "Harlo Device"—an adaptive, gamified, Pokédex-inspired "Living History Book" mobile software application.
- **Core Tasks:** Senior computer science students will design the lightweight computer-vision engine (utilizing OpenCV or TensorFlow Lite frameworks) to recognize regional assets (peanut hulls, sand, rocks, minerals, native foliage) via camera feeds. Education and Environmental Science majors will populate the data layers to teach youth about ecosystem architecture.

Track B: Columbus Technical College (Engineering & Electronics Technology)

- **Objective:** Hardware engineering, component sourcing, and casing architecture of the ruggedized Harlo physical shell.

- **Core Tasks:** Students will utilize CAD modeling to design shock-absorbent, high-durability plastic bumper encasements tailored for rugged outdoor youth field use. Electronics students will integrate low-cost microprocessors, touchscreen digitizers, and multi-spectrum camera lenses into a working, field-ready prototype.

3. MUNICIPAL IMPACT: FORT GAINES AS THE PRACTICAL IMPLEMENTATION HUB

The City of Fort Gaines will serve as the premier deployment site for both the industrial vertical-rearing facilities and the student-built Harlo educational systems. This provides:

- **Direct Job Creation:** Transitioning local workers into specialized Bio-Agricultural Technicians through curriculum pathways mapped by regional educators.
- **Civic Engagement:** Implementing the first localized youth "Bio-Expedition" program within Clay County schools, turning local natural geography into a gamified classroom.
- **Economic Resilience:** Cushioning local growers by processing agricultural residues and driving down municipal organic landfill weights.

4. ECONOMIC DEVELOPMENT & LOGISTICAL ALIGNMENT (COLUMBUS AUTHORITY)

By positioning Columbus as the "Innovation and Engineering Engine" and Fort Gaines as the "Industrial and Deployment Base," this cross-regional pipeline aligns perfectly with broader West Georgia economic goals:

- **Retention of Local Tech Talent:** Providing immediate, high-profile project portfolios for graduating seniors that bridge software, logistics, and advanced hardware manufacturing.
- **Supply Chain Optimization:** Utilizing Odynex Axis Logistics LLC frameworks to efficiently map tri-state raw cargo flows moving along the Chattahoochee River corridor toward global export channels.

5. PROPOSED NEXT STEPS & INITIAL RECONVENING

We are requesting an initial 30-minute joint introductory briefing via teleconference with leadership representatives from each office. The objective will be to align academic schedules for upcoming Capstone cycles and finalize preliminary municipal land-use/zoning overviews for the Fort Gaines facilities.

We look forward to collaborating to build an innovative, completely regional AgTech economy.

Sincerely,

David Fabian Cadelinia
